

## Diesel pressure power washer

### DIESEL PRESSURE WASHING EQUIPMENT

**Diesel pressure power washer units** are designed for the same cleaning applications as our **mobile gasoline pressure power washers**, but they are equipped with extended life diesel engines. Large diesel motors allow higher flows and pressures not possible with **gasoline power washers**. Our heavy-duty **industrial high pressure power washers** typically use metal wands and stainless steel nozzle tips, and are equipped with the durable, long life pumps. These versatile models are intended for every day and 8 or more hrs a day use. They are the best built power washers in power washing industry and are very popular among pressure cleaning contractors and are heavily used by the US Military.
